

Term Rewriting Systems

Exercise Sheet 1

Dr. rer. nat. Rafael Peñaloza / Marcel Lippmann
Summer Semester 2014

Exercise 1

Consider the reduction system (M, \rightarrow) with $M = \{A_1, A_2, A_3, A_4, B_1, B_2, B_3, C_1, C_2, C_3, C_4, D, E\}$ and $\rightarrow \subseteq M \times M$:

- $A_1 \rightarrow B_1, A_1 \rightarrow B_2, A_2 \rightarrow B_1, A_2 \rightarrow B_2, A_3 \rightarrow B_3, A_4 \rightarrow B_3,$
- $B_1 \rightarrow C_1, B_2 \rightarrow C_2, B_2 \rightarrow C_3, B_3 \rightarrow C_1, B_3 \rightarrow C_2, B_3 \rightarrow C_3, B_3 \rightarrow C_4,$
- $C_3 \rightarrow E, C_4 \rightarrow E,$ and
- $D \rightarrow C_4.$

Answer the following questions.

a) Which of the following properties are satisfied by \rightarrow ? Justify your answer.

- i) finite
- ii) symmetric
- iii) antisymmetric
- iv) reflexive
- v) irreflexive
- vi) transitive

b) Describe the following *closures*:

$\overrightarrow{\rightarrow}, \overset{+}{\rightarrow}, \overset{*}{\rightarrow},$ and $\leftrightarrow.$

Exercise 2

Let \rightarrow be the *symbolic differentiation relation* introduced in the lecture.

a) Compute the *normal forms* of the following terms:

- i) $D_X(((X * X) * X) + (X * X)),$ and
- ii) $D_X((X * Y) + (Y * Y)).$

b) Prove that \rightarrow is *terminating*.

Exercise 3

In the lecture, a *group* was defined by the following identities:

$$(x \circ y) \circ z \approx x \circ (y \circ z) \quad (\text{G1})$$

$$e \circ x \approx x \quad (\text{G2})$$

$$i(x) \circ x \approx e \quad (\text{G3})$$

- a) Prove that groups satisfy the property that e is a right unit, i.e.

$$x \circ e \approx x \quad (\text{G2}')$$

by showing that $x \circ e$ can be transformed to x using the identities G1, G2 and G3.

- b) Consider the following identity:

$$x \circ i(x) \approx e \quad (\text{G3}')$$

Prove that G1, G2 and G3' do not imply G2'.

Hint: Give a model of G1, G2 and G3' in which G2' does not hold; such a model exists with only two elements.

Exercise 4

Consider the following identities:

$$(x \circ y) \circ z \approx x \circ (y \circ z) \quad (\text{R1})$$

$$(x \circ y) \circ x \approx x \quad (\text{R2})$$

Prove or refute whether the following identities are implied by R1 and R2.

a) $(x \circ x) \approx x$

b) $(x \circ y) \circ z \approx x \circ z$
