Definition 11. (Model Generation)
Let C be a clause and S a set of clauses.

$R_C := \bigcup_{C \succ_C D} \epsilon_D$

If C is:

1. contained in S;

2. of the form $\Gamma \to l \approx r$
   and l is strictly maximal in C;

3. false in R_C^* ($R_C^* \not\models C$);

4. l is irreducible by R_C;

then $\epsilon_C := \{l \to r\}$, otherwise $\epsilon_C = \emptyset$.
